

ACML MATERIALS

We produce a full complement of aggregate and asphalt production for the Canadian construction industry and are one of Ontario's leading producers.

As a supplier to the Ministry of Transportation Ontario, we have been awarded five individual "Paver of the Year Awards" in the past five years. Our aggregate products have a reputation for quality and are used throughout the construction industry as raw materials for redimix, asphalt products and road base materials.

Work is accomplished through design-build contracts, joint ventures and value engineering. We have a history of successfully completing large complex projects in the development of major Canadian infrastructure.

Aecon supplies the industry with:

Asphalt

Asphalt is produced in our Brampton Asphalt Plant, which has quick and easy access to the growing northwest area of the Greater Toronto Area (GTA) as well as the major arterial roads and MTO highways. We operate a 10-acre property with a superb reputation for quality, earned over the 45 years of operation. In addition, we operate three portable asphalt plants available throughout Ontario for the construction of highway and airfield infrastructure.

Aggregates

We operate four quarries across the province with experienced staff and specialized equipment for the production of aggregates for the public and private sector. Our quarries are as follows:

- // **Orangeville Asphalt Plant**
- // **Marmora Quarry**
- // **Caledon Pit**
- // **Mountain Lake Quarry**

In addition to our quarries, we offer a number of portable aggregate production facilities for our clients.
