

AECON CONSTRUCTION ONTARIO EAST LIMITED

Aecon Construction Ontario East Limited is comprised of two divisions: Asphalt Paving and Construction.

With respect to commercial site development, we typically provide site services such as building site excavation, sewer & water installations, granular work, structures, asphalt paving and overall site completion. In addition, we offer utility installation services such as gas, hydro and telecommunications.

Asphalt Paving

The combination of the Asphalt Paving and Construction divisions provide three interrelated services within their road construction and paving sectors:

- // Municipal road and infrastructure construction
- // Asphalt paving – including testing and mix design
- // Commercial site development

Construction

We offer road construction, site preparation, and remediation services. Our work on Highway 417 from Kanata to Bayshore and the Terry Fox extension in Kanata are two prime examples of our high quality work.

Quality Control

We recognize the importance of providing customers with products that are “on-spec” to ensure that projects run efficiently and are not held up due to incorrect or poor-quality products. Our quality control department was created to perform regular testing to ensure that materials not only meet specification, but conform to our high standards of approval.

Aecon Construction Ontario East Limited has CCIL certified laboratories that provide design to placement services for the Asphalt Paving division and compaction placement services for the Construction division.
