

AECON INDUSTRIAL CENTRAL CANADA

Aecon Industrial Central Canada is a market leader in engineering, procurement, construction and maintenance for the heavy industrial sector, including nuclear and non-nuclear power, oil & gas, petrochemical, steel and automotive.

With a focus on power generation, Aecon serves the nuclear, hydroelectric, fossil, biomass, and natural gas industries. Maintenance and capital improvement projects are also key components of our field construction services.

In addition to the turnkey construction of power generation facilities, Aecon is known for the pioneering of prefabricated piping services to better manage site labour and the integration of specialized coating systems into the fabrication process.

Piping, custom steel, and module fabrication is performed in our 120,000 square foot Cambridge, Ontario facility using state-of-the-art, automated equipment. A fully automatic welding machine, numerous semi-automatic machines, as well as an on-site post weld heat treatment furnace and heated blasting/coating facility, gives us the shortest spool fabrication times in the industry.
