

# KARSON AGGREGATES

Karson Aggregates produces a wide range of aggregate products for construction projects and for external sales. We have the ability and means to supply large or smaller scale projects with granular products and services. We also provide home delivery services for those living in the City of Ottawa and surrounding areas. Karson Aggregates can provide services for customers with our fleet of tri-axles, trailers, water trucks and equipment transport.

With five quarries and three sandpits, we have the right aggregates in the right locations to service the Eastern area of Ontario effectively. Being close to market aggregates is important – it produces more efficient service, and at the same time, reduces greenhouse gas emissions by minimizing transportation of materials.

Aggregates are available for roadbeds, asphalt paving and ready-mix concrete. Sand or topsoil is available for concrete production, landscaping and golf course construction.

## AGGREGATE FACILITIES

- // 4 limestone quarries in current production
- // 3 sand pits
- // 30 trucks available for delivery

## USGA QUALITY GOLF COURSE MATERIALS

Karson Aggregates is a reputable supplier of “non-calcareous” root zone sand and mixtures that are necessary as free draining growth mediums on golf greens.

## QUALITY CONTROL

- // Our Quality Control department was created to perform regular testing to ensure that materials not only meet specification, but conform to our high standards of approval.
- // Karson Aggregates has CCIL certified laboratories that provide physical properties testing for our materials.
- // We offer an unparalleled depth of expertise and capabilities that can be called upon to deliver an integrated solution to any infrastructure project.
